Homework is impossible to evaluate as too much generative AI is involved in the answers.

Exam is scored in [0,20] plus adjustments (types of error, code correctness, code working, AI-like code, etc...)

The percentage score in the suspicious cases is the likelihood of the code being artificially generated (score computed using tools like poe.com, gptzero, ...).
I only considered scores greater than 60% as the code to write was very short.
